About Muhammad

AI Red Teamer specializing in adversarial testing of Large Language Models (LLMs) and AI systems. Experienced in designing and executing advanced prompt injection attacks, jailbreak techniques, and multi-turn exploitation strategies to identify high-impact vulnerabilities.

Proven track record in leading AI security competitions including HackaPrompt (Top 5 & Top 10 rankings), with hands-on experience building AI attack labs, developing proof-of-concepts (PoCs), and evaluating model robustness under real-world threat scenarios.

Skills

Jailbreak | Prompt Injection | Red Team | Tool Building | Agent Exploitation | Attack Chains | Security Testing | Python | Cyber Security Assessment | Large Language Model (LLM) | Prompt Engineering | AI Agents | Penetration Testing | Vulnerability Research | AI Exploitation

Experience

Gray Swan AI

AI Red Team Consultant

Remote, United States

February 2026 - Current

AI Agents | Prompt Injection | Red Team | LLM Exploitation | Agentic System Manipulation | Adversarial Testing

Perform offensive security testing against AI systems in structured red teaming environments.
Develop adversarial prompt techniques to bypass safety safeguards in LLMs and agentic AI systems.
Identify vulnerabilities such as prompt injection, instruction override, and model manipulation.
Conduct adversarial testing on large language models to identify safety bypasses and harmful behavior generation.
Design and craft advanced prompts to evaluate model safeguards against policy violations.

Analyze model responses to determine successful or failed safety breaks and document findings.

HackAPrompt
AI Red Teamer
Remote, United States
July 2025 - Current

AI Agents | Jailbreaking | Prompt Engineering | Attack Strategy Design | Multi-turn Attacks

Conduct AI Red Teaming assessments on LLMs, AI agents, and interactive AI systems.
Design, implement, and test prompt injection attacks, including multilayered and evasive strategies.
Participate in advanced AI security competition such as HackaPrompt, & be in Top 10 & Top 5 on the Leaderboard by solving complex challenges involving token-based scoring, multi-intent extraction, and layered AI exploitation.
Develop PoCs, scoring frameworks, and structured methodologies for AI vulnerabilities.
Build and refine tools and local labs to simulate AI attacks, measure effectiveness, and automate testing.
Document vulnerabilities, attack strategies, and mitigation recommendations in structured reports.

HackerOne
AI Bug Bounty Hunter
Remote, United States
February 2021 - February 2026

Security Testing | LLM Security | AI Vulnerability Research | Analysis | Red Team

Conducted comprehensive AI red teaming assessments on LLMs and AI-driven applications across public programs and research environments.
Identified vulnerabilities such as prompt injection, jailbreaks, data leakage, instruction override, context manipulation, and model misalignment issues.
Performed manual adversarial testing using crafted prompts, multi-turn attack chains, and behavioral analysis of model responses.
Validated exploitation scenarios and developed detailed proof-of-concepts (PoCs) demonstrating real-world impact on AI systems.
Prepared professional vulnerability reports including risk assessment, attack methodology, and actionable mitigation strategies for AI safety.

Followed responsible disclosure practices while maintaining strict ethical standards in AI security testing.
Continuously researched and applied advanced AI attack techniques, including evasive prompting, encoding strategies, and agent manipulation to enhance testing effectiveness.

Education

Air University
BS Cyber Security
Pakistan, Current

Portfolio

PromptForge
https://github.com/faseeh-ul-hassan/PromptForge

PromptForge is a portfolio-grade **AI Red Teaming & Prompt Injection Testing Framework** designed to evaluate the security posture of Large Language Models (LLMs) against adversarial prompt-based attacks.

LLM Output Firewall
https://github.com/faseeh-ul-hassan/LLM-Output-Firewall

A **drop-in, LLM-based AI Output Firewall** that secures AI-generated text using a **Model-as-Judge architecture**.
It Prevents system prompt leakage, unsafe instructions, and sensitive data exposure automatically.

Certifications

Certified AI Email Security Specialist - Proofpoint
Certified AI Data Security Specialist - Proofpoint
Certified Cyber Security Analyst - CyberWarfare Labs
